ALCANTARA SAFETY SOLUTIONS

The Safety Plan
Essentials Checklist

60 inspection-readiness checkpoints across the six program areas where OSHA and WorkSafeBC citations concentrate — plus a corrective-action tracker.

60-Point Inspection Readiness Checklist

How to use it: Block 90 minutes. Walk your facility with this checklist and mark every item only when it is *fully* in place — documented, current, and matching actual practice. Anything unchecked goes on the corrective-action tracker on page 3 with an owner and a date. Repeat quarterly.

1. Written Programs & Documentation

- ☐ Health & safety policy statement signed by senior management, reviewed annually
- ☐ Hazard communication / WHMIS written program in place and current
- ☐ Emergency action plan documented for every site
- ☐ Fire prevention plan documented and posted
- ☐ PPE hazard assessment completed in writing for each role
- ☐ Lockout/tagout program with machine-specific procedures
- ☐ Every written program describes your actual sites, equipment, and headcount
- ☐ Roles and responsibilities assigned by name, not job title alone
- ☐ Joint health & safety committee / worker representative established (BC: 20+ workers)
- ☐ Safety data sheets current and accessible for every chemical on site

2. Training & Records

- ☐ New-worker orientation documented before first shift
- ☐ Training records show who, what, when, and how competency was verified
- ☐ WHMIS / hazard communication training current for all staff
- ☐ First aid certificates valid and posted with attendant names
- ☐ Equipment-specific operator training documented (forklift, aerial lift, etc.)
- ☐ Supervisor safety training completed and recorded
- ☐ Refresher training scheduled, not just "as needed"
- ☐ Toolbox talks / safety meetings held regularly with attendance records
- ☐ Young and new worker supervision requirements met
- ☐ Contractor orientation process documented for site visitors

3. Hazard Controls

- ☐ Formal risk assessment completed for all routine tasks
- ☐ Machine guarding in place and inspected on every power tool and machine
- ☐ Fall protection plan and equipment where work exceeds threshold heights
- ☐ Confined space inventory and entry procedures posted
- ☐ Chemical storage segregated, labelled, and ventilated correctly
- ☐ Housekeeping standard maintained — walkways and exits clear
- ☐ Noise exposure assessed; hearing protection zone signage posted
- ☐ Ergonomics / safe-lifting controls for manual handling tasks
- ☐ Electrical panels accessible, labelled, with clearance maintained
- ☐ Vehicle and mobile equipment inspection program in daily use

4. Inspections & Maintenance

- ☐ Recurring workplace inspections scheduled (weekly/monthly by area)
- ☐ Inspection findings documented with named corrective owners
- ☐ Corrective actions tracked to completion with dates
- ☐ Preventive maintenance schedule current for all critical equipment
- ☐ Defective equipment tagging / lockout process in use
- ☐ Fire extinguisher and alarm inspections current (monthly + annual)

- ☐ Ladders, scaffolds, and lifting gear inspected before use and annually
- ☐ Joint committee participates in inspections (BC requirement)
- ☐ Inspection records retained and retrievable for at least 3 years
- ☐ No backlog of uncorrected findings older than 30 days

5. Incident Reporting & Investigation

- ☐ Incident reporting procedure known to all workers
- ☐ Near-miss reporting encouraged and tracked
- ☐ OSHA 300 log current (U.S.) / WorkSafeBC claims records current (BC)
- ☐ Reportable-incident timelines known (fatalities, serious injuries)
- ☐ Investigation procedure identifies root causes, not just blame
- ☐ Corrective actions from investigations tracked to completion
- ☐ Return-to-work / modified duties program documented
- ☐ First aid treatment records maintained
- ☐ Incident trends reviewed at management level at least annually
- ☐ Witness statement and evidence preservation procedure in place

6. Emergency Preparedness

- ☐ Evacuation routes posted at all exits and assembly points marked
- ☐ Fire drill completed within the last 12 months and documented
- ☐ Emergency contact list current and posted
- ☐ First aid kits stocked, sealed, and inspected monthly
- ☐ Eyewash stations accessible where corrosives are handled
- ☐ Emergency lighting and exit signs tested and working
- ☐ Spill response kit and procedure available where required
- ☐ Fire wardens / evacuation coordinators assigned by name
- ☐ Lone-worker check-in procedure in place
- ☐ Annual program review completed with documented sign-off

> **WorkSafeBC note.** Items marked for BC reflect OHS Regulation and Workers Compensation Act requirements (joint committees at 20+ workers, worker representatives at 10–19, formal programs at 20+). U.S. items reflect federal OSHA; state plans (California, Washington, and others) may add requirements.

Corrective-Action Tracker

Every unchecked item goes here. Assign one owner and one date — a finding without both is a citation waiting to happen. Review the tracker at every safety meeting until it's empty.

Found More Gaps Than You Can Close Alone?

That's normal — and it's exactly what a safety plan coordinator is for. Alcantara Safety Solutions turns checklist results into a complete, regulation-ready program: written plans, hazard assessments, training systems, and inspection-ready records, custom-built for your operation in Canada or the U.S.

1. **Book a free consultation** — bring this checklist and we'll prioritize your gaps together.
2. **Get a fixed quote** — no hourly billing, no surprises, revisions included.
3. **Receive your program** — most single-site plans delivered in two to four weeks.
